

# Drench-Mate™ Drink

## Features & Benefits

*Drench Mate™ Drink* is a one-time, drinkable supplement that is readily consumed by fresh cows. *Drench Mate™ Drink* is designed to jump-start the growth of the rumen microbes and to provide critical vitamins and other cofactors that may limit the metabolism of fats and carbohydrates. In addition, *Drench Mate™ Drink* helps correct the physiological imbalance caused by the loss of fluids, electrolytes and buffers with calving.

## FEATURE

## BENEFIT

Water dispersible ingredient matrix	The convenient drink powder readily dissolves in warm water and is easy to use
Temperature-sensitive color indicators	Allows the user to easily determine that the drink is at the correct temperature for solubility and drinking
High palatability	When used as directed, the product is readily consumed by cows
Multi-source glucose	Glucose is supplied directly and indirectly through metabolic precursors. This helps maintain blood glucose, improves insulin function, and reduces blood fatty acid levels
Highly soluble calcium	Water dispersible sources of calcium insure rapid solubility and absorption of calcium which helps reduce the risk of milk fever and other diseases related to subclinical hypocalcemia
Liver health pack	Methyl donor compounds and B-vitamins are included that improve liver function and reduce the risk of ketosis and other problems related to liver fat metabolism
Electrolytes	Replaces critical electrolytes lost during calving
Immune booster pack	Specific micronutrients and immune stimulants enhance antioxidant status and immune function
